With a variety of tools, the user can make simple 2D drawings that typically include lines, curves, or circles for the major components, including rectangles, ellipses, circles, squares, and polygons. 2D drawings can be saved in the AutoCAD native format, DWF, or DXF. Most 2D drawings that are created with AutoCAD are drafted in either 2D or 3D. 3D drawings are generally created by drawing 2D drawings or by using built-in 3D modeling and 3D viewing tools. The best-selling AutoCAD LT software package (formerly AutoCAD Basic) is an entry-level version of AutoCAD and can be used to create 2D drawings.

AutoCAD LT is available as a desktop app and as a subscription service. Autodesk offers AutoCAD LT and AutoCAD LT Basic to all new customers. I've got this small (free) iPhone development project that I'd like to start off, and was wondering what some of the popular CMS systems (like WordPress, Drupal, Joomla, etc.) are for iPhone development. Thanks A: Well, it's a blog, so you might want to try the SwiftBlogger by @jeffsundell. It's free, open-source, full-featured and works great. Q: Do any countries currently have a climate similar to what we had in the late Cretaceous? I'm not referring to "climate change" as much as I'm referring to more natural, warmer periods in Earth's history. Could anyone identify a natural, warmer period during which humans could still live? I imagine it'd have to be a colder period, but I'd be interested to know what the temperature was and how close we can get. A: The Earth's Climate has been stable for the past 80 mya. The history of life on Earth is pretty good at sustaining through all those climatic oscillations. This is because, unlike an ice-ball, the Earth's climate is not dependent on

gravitational friction and thermal conduction but rather on the sun's energy. The Earth does not get out of orbit as a planet but keeps rotating about the sun at the same rate as the sun orbits. The sun's energy does not change and the heating of the Earth-sun system does not change. Thus, the Earth-sun system keeps warming up until it reaches a certain stable temperature range. The situation changes when ice is added to the surface of the Earth and when CO₂ is pumped into the atmosphere. It takes about a million years to add a kilometer to the ice sheets at the poles (on the average of a1d647c40b
