

FLV to MP3 Free Converter is a simple-to-use software that allows you to encode video clips from the FLV format to the MP3 extension, but also to AVI, MPEG and WMV. The interface of the application is simplistic and intuitive. Upon initialization, you can specify the output profile (audio or video), after which you can start importing FLVs into the list by using the file browser only, because the "drag and drop" method is not supported. In the queue you can check out the source path, duration and status of each video. Once you specify the output format (in case of video conversions) and destination, you can proceed with the encoding process. On top of that, you can modify audio and video parameters when it comes to the bit rate, frame rate, size and channels. Settings can be restored to their default values at any time. But you can also enable FLV to MP3 Free Converter to automatically rename, overwrite or skip files with existing names, remove an item from the list and clear the queue. The media conversion tool requires a very low amount of system resources (which is barely noticeable), allows multiple instances, can take a while to finish a task and manages to keep a fair image and sound quality (it could had had definitely been better). There is no help file available and the interface is outdated. To sum it up, FLV to MP3 Free Converter is a pretty decent program for FLV conversions and we mainly recommend it to novices.
