Why else do the House of Representatives and Senate have such different plans for the budget? It's not simply that the House wants to cut spending; House Speaker Nancy Pelosi has made it plain that the main item of concern is the "sequester" spending cuts. And conservatives have made it clear: The House plan is unacceptable. The Senate, though, has a way out. By eliminating the sequester spending cuts -- without cutting spending overall -- the Senate has the best chance of achieving the spending cuts it favors. That's what Majority Leader Harry Reid is doing. And, with the unemployment rate at 7.6 percent and with job creation at an all-time low, it's a winning plan. By all means -- let's cut spending. But

Q: Heat transfer and sound My book states that the speed of sound in air varies as the temperature increases. I understand that the decrease in density of air causes the decrease in speed but I do not understand why the increase in temperature causes the increase in speed. I would be happy if you could explain to me how the speed of sound varies when temperature changes. Thank you. A: At unit temperature, the speed of sound is independent of temperature. Also, at unit temperature, the relationship between density, pressure, and temperature is:  $\rho = p \cdot \frac{1}{v^2}$  If you raise one of the temperature quantities (pressure, density or volume), you must decrease the other three. That is the essence of the adiabatic law and why increasing temperature decreases density. At unit pressure, the equation above doesn't hold as the temperature dependence of  $\rho$  is significantly larger than the temperature dependence of  $v$ . Because the product of density and speed of sound is always constant, we have:  $c \propto \frac{1}{\rho} \propto v^2$  This shows us directly that increasing the temperature increases the speed of sound.

The Concourse is a 2D action racing game that pits the player against AI controlled opponents. In order to win, you must perform actions and reactions at the right time. You can use your shield to deflect energy attacks, repel them, or deflect them away from your opponents. Some attacks can completely change your racing direction, while others could cause an opponent to run into an obstacle and crash into a gap. With some skill and careful planning, you'll have a chance at victory! System Requirements: Windows 7 - 8 - 10 (1.6GHz, 1GB RAM) High definition display (1920 x 1080) Minimum supported OS: Windows 7, Windows 8, Windows 8.1 Optional Requirements: DirectX 11 C:\Program Files\Duck Game Studios\The Concourse\The Concourse.exe Publisher's Description: The Concourse is a highly competitive, 2D action racing game. Your objective is to win as many races as you can in a series of randomly generated courses. In each race, players are faced with AI opponents. With each race, a player may modify the course conditions, including flag locations and obstacles, in an effort to create a unique and challenging course. At the completion of each race, the player chooses a modifier to apply to the next race, which will be a different race. Race times are random, but the variation in the course conditions between each race is controlled by the player. What is new in this release: The Concourse's best-in-class AI has been upgraded to include a new tactical mode and an expanded rule set The Concourse is a racing game designed to allow players to choose from a variety of creative options which can be enabled or disabled on a per-race basis. Players can enable in-race bonuses including increasing speed, permanently inverting controls, and decreasing the effectiveness of energy attacks. With over 600 permutations in a game, there is always something new to experiment with! Players can also choose between AI opponents that are light on experience and can be easily defeated or ones that are more experienced and harder to beat. Per race, players can modify their chosen character by increasing speed, speeding up or slowing down, or changing their weapons power. This can be done for each race individually, or for all races toggled on, allowing the character to remain the same. User reviews: Overall: Very Positive (12 reviews) - 94% of the 12 c9d1549cdd
