Trilogy Collection is Out Today on PS4. AT&T to Buy CNBC's Diverse Set of Media Assets For \$1.5B. 3DS is the best system of the year.. Hemodynamic effects of acute oral administration of propranolol or metoprolol on essential hypertension. The hemodynamic effects of oral administration of propranolol or metoprolol for four weeks were examined in 19 essential hypertensive subjects. After two weeks of antihypertensive treatment with oral propranolol, the mean blood pressure significantly decreased from 178/109 to 145/91 mm Hg with an average daily dose of 400 mg. During treatment, plasma norepinephrine level decreased significantly. After four weeks, heart rate and cardiac output were unchanged, whereas stroke volume was increased. The systolic and diastolic blood pressures decreased significantly to less than 140/90 mm Hg. Metoprolol, on the other hand, was effective in 17 of the subjects. After one week of oral treatment, the mean blood pressure decreased from 179/105 to 150/92 mm Hg with an average daily dose of 250 mg. After four weeks of treatment, heart rate and cardiac output remained unchanged, whereas stroke volume was significantly increased, resulting in an increased total peripheral resistance. The mean blood pressure decreased c6a93da74d
